RESTRICTION

Application status

1. The present application is a 371 filing, the national stage of PCT/EP99/00716 filed February 3, 1999. applicant is advised that when the application is taken up for examination the filing date of the German priority document, 198 04 372.4 filed February 4, 1998, will not be considered because the document has not been translated into English.

2. Prior art has been found in the application but is not accompanied by an Information Disclosure Statement or a 1449 form. Applicant is advised that those references that are not in English will not be considered.

Restriction: Lack of unity of invention

3. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1. In accordance with 37 CFR 1.499, applicant is required, in response to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-38 and 52-67, drawn to a nucleic acid amplification method;

Group II, claim(s) 39-51 and 68, drawn to an oligonucleotide and oligonucleotide kit.

4. The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The special technical feature, mRNA encoding the catalytic subunit of human telomerase, was known in the art and the cDNA sequence was available from GenBank as disclosed by Nakamura et al. (15 August 1997) (SCIENCE 277: 955-959). The claimed method of concentrating and quantifying tumor cells in body fluid by measuring the amount of specific mRNA in the cells was practiced in the art as taught by Sidransky (5,726,019) (see examples).
